## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 101***

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 44-52 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

The claimed invention is directed to a judicial exception to 35 U.S.C. 101 (i.e., an abstract idea) and is not directed to a practical application of such judicial exception (e.g., because the claim does not require any physical transformation and the invention as claimed does not produce a useful, concrete, and tangible result). The language in the claim lacks a tangible result at the end of the procedure.

### ***Allowable Subject Matter***

3. Claims 44-52 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 101, set forth in this Office action.
4. The following is a statement of reasons for the indication of allowable subject matter:
  - a. With respect to claim 44, the claim has been found allowable over the prior art of record because the prior art of record fails to teach or fairly suggest a method for receiving a response signal via an antenna arrangement from a substance having a quadrupolar nuclei excited so as to produce nuclear quadrupole resonance in certain of

the quadrupolar nuclei, comprising the step of noise matching an amplifier to the antenna and lowering the Q factor of the antenna system during an entire duration of a receiving period in combination with the remaining limitations of the claim.

b. With respect to claims 45-52, the claims have been found allowable due to its dependency on claim 44 above.

5. Claims 1-43 and 53-54 are allowed.

6. The following is an examiner's statement of reasons for allowance:

c. With respect to claim 1, the claim has been found allowable over the prior art of record because the prior art of record fails to teach or fairly suggest a receiving system for connection to an antenna arrangement for detecting response signals from a substance having quadrupolar nuclei excited so as to produce nuclear quadrupole resonance therein, the system comprising a matching section to closely noise match the receiving system to the antenna for the entire duration of a receiving period; and has a low impedance to reduce the Q factor of the antenna in combination with the remaining limitations of the claim.

d. With respect to claim 53, the claim has been found allowable over the prior art of record because the prior art of record fails to teach or fairly suggest a system for connection to an antenna arrangement for receiving and detecting response signals from a substance having quadrupolar nuclei excited so as to produce nuclear quadrupole resonance therein, the system comprising means for noise matching the amplifier to the antenna during the entire duration of a receiving period and means for reducing the Q

factor of the antenna during the receiving period in combination with the remaining limitations of the claim.

e. With respect to claims 2-43 and 54, the claims have been allowed due to its dependency on claim 1 above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art of record cited in the PTO 892 discloses antenna and amplifier arrangements with matching systems after the receiving period wherein the Q factor is higher during the receiving period and lowered after the receiving period.
